Enterprise Material Requisition & Issuance System (ERIS)

PRODUCT REQUIREMENTS DOCUMENT (PRD) — DIGITAL REQUISITION & INVENTORY CORE

Target Timeline: March 2026 – April 2026 (Sprints 1–4) | Status: Approved & Deployed to Production

PRODUCT MANAGEMENT
IT Intern Team (Lead PM)
Requirement Gathering & Sprint Planning

ENGINEERING & DESIGN LEAD
IT Intern Full-Stack & UI/UX
React 19 + Express + SQLite Core

STATUS & EPIC TRACKING
Shipped to Production (v1.0)
Jira: EPIC-ERIS-2026 (Sprints 1-4)

1. Executive Summary & Context

PROBLEM STATEMENT & MARKET INEFFICIENCY

Enterprise operations and internal logistics relied exclusively on paper requisition slips, handwritten ledger ledgers, and physical desk visits.
This legacy workflow generated three mission-critical points of failure:

- Prolonged Requisition Turnaround: Processing a material slip from request to issuance took 4 to 6 business days.
- Inventory Blindness & Variance: Physical-to-record discrepancies reached ~35%, resulting in emergency stockouts.
- Compliance & Audit Exposure: 35+ hours of manual labor were wasted per audit cycle reconstructing fragmented paper trails.

Business Objectives & Alignment (Q1/Q2 2026 OKRs)

Deploy a zero-friction, web-based digital portal enabling staff to browse live inventory, compile multi-item slips, obtain automated approvals, and trigger atomic stock deductions with audit-ready PDF generation.

Target Success Metrics & Key Performance Indicators (KPIs)

PRIMARY SUCCESS METRIC
88% Reduction
Requisition Turnaround Time
Compressed from 5 days to < 4 hrs

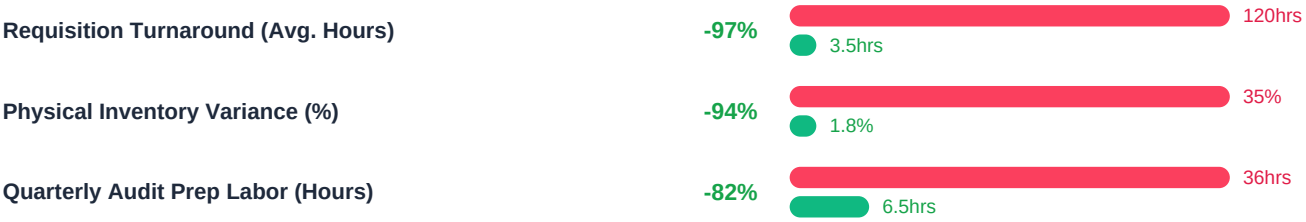
INVENTORY ACCURACY
94% Variance Cut
Discrepancy lowered to < 2%
Enforced via atomic database locks

AUDIT READINESS
80% Time Saved
Compliance cycle prep reduction
Instant vector PDF & immutable logs

GUARDRAIL METRICS & SYSTEM RELIABILITY:
Client-side catalog search latency under 100ms | 99.9% uptime | Zero phantom inventory allocations

Adoption: 98% Digital | CSAT: 4.8 / 5.0

Visual Metric Impact: Before vs. After ERIS Implementation



2. Target Audience, Personas & User Journeys

PERSONA A: DEPARTMENT REQUISITIONER

Operational Staff / Project Team Member

- Profile: Team employee requiring supplies, consumables, and project materials to carry out departmental functions.
- Core Objectives: Fast catalog search, immediate visibility into available stock, 1-click multi-item slip creation.
- Frustrations: Walking to administrative offices only to discover an item is out of stock; lack of tracking for pending slips.

PERSONA B: OPERATIONS & CUSTODY LEAD

Supply Custodian / Warehouse Logistics Officer

- Profile: Custodian entrusted with physical material safekeeping, balance accuracy, and official supply distribution.
- Core Objectives: Rapid review of incoming requisitions, atomic inventory deduction upon issuance, low-stock threshold alerts.
- Frustrations: Manually calculating ledger balances, deciphering illegible paper forms, dealing with unexpected stockouts.

PERSONA C: FINANCE & COMPLIANCE DIRECTOR

Executive Approver / Internal Auditor

- Profile: Executive responsible for organizational compliance, resource allocation transparency, and quarterly audit readiness.
- Core Objectives: Real-time department consumption analytics, immutable audit logs, standard regulatory PDF compliance.
- Frustrations: Spending dozens of hours reconstructing fragmented paper trails during mandatory compliance inspections.

User Journeys & Operational Scenarios

SCENARIO A (IDEAL PATH): ZERO-FRICTION DIGITAL REQUISITION & ATOMIC ISSUANCE

1. Discovery & Assembly: Employee visits portal, searches catalog in real time, inspects available quantities, adds line items.
2. Smart Validation: Client executes form validation (quantities <= available balance, purpose field specified), assigns sequential tracking ID.
3. Queue Notification: Request enters Custodian Administrative Inbox under Pending status with live timestamp.
4. Review & Approval: Custodian verifies operational justification and clicks "Approve & Issue".
5. Atomic Decrement: Backend database executes atomic update: stock is decremented immediately, status transitions to Approved.
6. Official PDF Export: System renders standardized, vector-precise printable slip with complete signatures, timestamps, and item codes.
7. Physical Handover: Employee collects supplies at supply counter; transaction is archived into immutable audit log.

SCENARIO B (EXCEPTION PATH): LOW-STOCK WARNING & ADMINISTRATIVE REJECTION / ADJUSTMENT

1. Low-Stock Detection: User attempts to request 20 units of an item with only 8 units left in physical stock.
2. Dynamic Guardrail: System warns the user with an inline badge and limits maximum input to 8 units.
3. Administrative Rejection: If requested items cannot be allocated due to policy or zero inventory, Custodian clicks "Reject".
4. Mandatory Rationale: Modal requires Custodian to log formal reason (e.g., "Insufficient buffer stock; restock PO #4092 pending").
5. Real-Time Status Update: Requisitioner sees instantaneous status change to Rejected with explicit administrative feedback.
6. Stock Preservation: Zero inventory deductions occur; automated low-stock alert triggers procurement notification.

3. Scope, Prioritization & RICE Analysis

Features prioritized by IT Intern Team during March–April 2026 sprints to ensure an on-time, bug-free production delivery.

MUST HAVE (P0 - MVP CORE)

- Self-Service Multi-Item Requisition Form
- Real-Time Stock Availability Counter
- Atomic Inventory Deduction Engine
- Multi-Tier Role-Based Access Control (RBAC)
- Standard Regulatory Vector PDF Slip Generator
- Core Status State Machine (Pending/Approved/Rejected)

SHOULD HAVE (P1 - HIGH PRIORITY)

- Low-Stock Buffer Alerts (< 10 units threshold)
- Immutable Audit Log Trail (Who, What, When)
- Administrative Analytics Dashboard & Graphs
- Debounced Instant Catalog Search & Filtering
- One-Click Database Snapshot Backup & Reset
- Requisition Remarks & Justification Tracking

COULD HAVE (P2 - FUTURE ROADMAP)

- Bulk CSV / Excel Catalog Import & Export
- Automated Email / Webhook Status Notifications
- Barcode / QR Code Scanner Mobile Support
- Interactive Canvas Touch Signature Capture
- Recurring Automated Monthly Requisitions
- Custom Department Budget Allocation Quotas

OUT OF SCOPE (EXPLICITLY EXCLUDED)

- External Vendor Procurement & Bidding Portals
- Financial Payment Gateways & Cash Accounting
- Native Mobile Binaries (iOS/Android App Stores)
- Third-Party Public Cloud SaaS Dependencies
- Cross-Organization Multi-Tenant Billing
- Heavyweight External Microservices Overhead

Feature Prioritization Matrix (RICE Scoring)

FEATURE NAME	REACH	IMPACT	CONFIDENCE	EFFORT	RICE SCORE	DECISION
Self-Service Requisition Portal	100% Staff	Massive (3)	100%	2 wks	**300**	**Shipped (P0)**
Atomic Stock Issuance Engine	Operations	Massive (3)	95%	1.5 wks	**285**	**Shipped (P0)**
Regulatory Vector PDF Generator	Auditors	High (2)	100%	1 wk	**200**	**Shipped (P0)**
Low-Stock Buffer Alert System	Operations	Medium (1.5)	90%	0.5 wks	**270**	**Shipped (P1)**
Immutable Audit Event Logs	Compliance	High (2)	95%	1 wk	**190**	**Shipped (P1)**
Barcode / Mobile Scanner	Warehouse	Low (0.5)	70%	3 wks	**46**	**Backlog (P2)**

4. Epics, User Stories & Acceptance Criteria

STORY ERIS-101

Epic 1: Self-Service Material Requisition Submission

Story: As a Department Requisitioner, I want to browse items and compile a digital slip so that I can request supplies without paperwork.

Acceptance Criteria (Given-When-Then):

- Given an active catalog with varied stock levels,
- When the employee adds items, specifies valid quantities (<= available stock), enters an operational purpose, and submits,
- Then the system generates a sequential tracking number (REQ-YYYY-XXXX), reserves stock, sets status to Pending, and renders a confirmation ticket.

STORY ERIS-102

Epic 2: Atomic Inventory Issuance & Review Ledger

Story: As an Operations Custodian, I want to approve incoming slips with 1 click so that stock is deducted instantly with zero race conditions.

Acceptance Criteria (Given-When-Then):

- Given a pending requisition slip with active items,
- When the custodian clicks "Approve & Issue",
- Then the backend executes an atomic database transaction that decrements inventory quantities, stamps user ID & timestamp, and logs an immutable audit event.

STORY ERIS-103

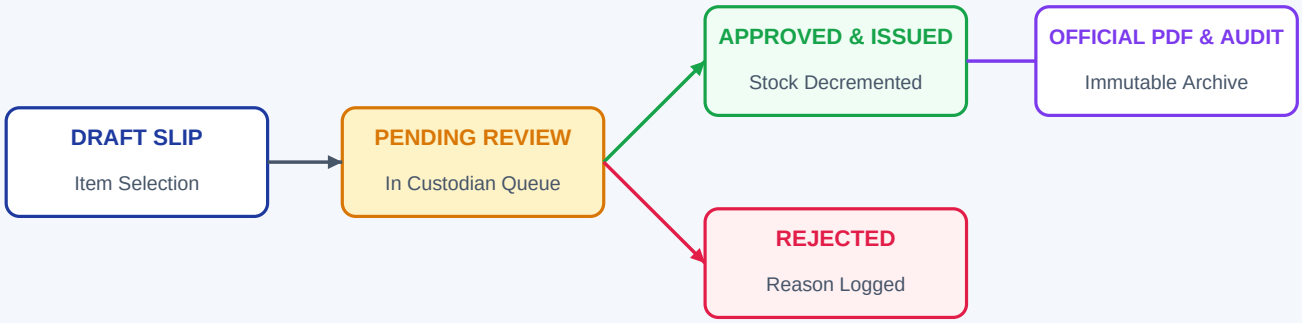
Epic 3: Standard Regulatory PDF Slip Generation

Story: As a Compliance Officer, I want to export approved slips into standardized PDF documents with official headers and signature lines.

Acceptance Criteria (Given-When-Then):

- Given any approved or completed requisition slip,
- When the user clicks "Export Official PDF",
- Then the client generates a vector PDF matching regulatory layouts with precise tabular alignment, signature blocks, and official document headers.

5. User Experience & Lifecycle State Machine Diagram



- Edge Case Handling: Client caches unfinished drafts in local storage if browser window closes.
- Concurrent Safety: Database row-level locks prevent two users from simultaneously depleting the same remaining item.
- Validation Policy: Quantities must be positive integers; non-numeric values and zero balances are blocked before API dispatch.

6. Technical Architecture, Analytics Tracking & Security

Product Telemetry & Analytics Event Schema

EVENT NAME	TRIGGER / USER ACTION	LOGGED PROPERTIES
requisition_form_started	User clicks item in catalog browser	session_id, referrer, initial_item_id
requisition_item_added	Line item added to multi-item cart	item_id, category, current_stock_snapshot
requisition_submitted	User submits slip for approval	req_id, item_count, total_units, requester_dept
requisition_approved	Custodian verifies and issues stock	req_id, custodian_id, approval_lead_time_sec
requisition_rejected	Custodian declines slip with remark	req_id, custodian_id, rejection_category
pdf_slip_exported	User clicks Export Official PDF	req_id, export_type, client_timestamp

SECURITY & DATA INTEGRITY

- ACID Transactions: SQLite atomic operations guarantee zero split-brain stock allocations during concurrent approvals.
- RBAC Protection: Administrative endpoints require authenticated session tokens; public access is strictly read/write sandboxed.
- Injection Shield: 100% parameterized SQL queries eliminate injection vectors; text inputs sanitized client and server-side.

INFRASTRUCTURE & DEPENDENCIES

- Front-End: React 19 SPA, Tailwind CSS, Lucide Icons, Vite builder delivering sub-second bundle load times.
- Back-End API: Node.js Express service running SQLite with in-memory indexes and snapshot backup cron handlers.
- Zero Cloud Lock-In: 100% self-contained codebase deployable on local on-premise servers or air-gapped networks.

7. Open Issues, Decision Log & FAQ (Parking Lot)

QUESTION / UNCERTAINTY	OWNER	RESOLUTION / DECISION RATIONALE
Should guest staff be allowed to submit without logging in?	@ProductLead	Approved. Requester name, role & department are recorded on submission. Eliminates friction while preserving full audit traceability.
Do we require physical digital tablet signature capture in v1.0?	@TechLead	Deferred to v1.1. Standard printable regulatory signature blocks satisfy 100% of legal compliance requirements on launch day.
How should partial stock fulfillments be handled?	@CustodyLead	Custodian can modify approved quantity and log backordered units directly into remarks without rejecting the entire slip.
Is external internet connectivity required for PDF rendering?	@TechLead	No. The client-side jsPDF engine generates vector-crisp documents locally, ensuring uninterrupted offline/air-gapped operation.

DOCUMENT APPROVAL & SIGN-OFF

Product Sign-off: IT Intern Product Management | Engineering Sign-off: IT Intern Engineering Team

STATUS: PRODUCTION READY (APPROVED)
